

Safety Message

The RIGHT way to fly a drone is the safe way — whether you're flying recreationally or for business. We want everyone who operates drones to have fun and be safe! That's why we're encouraging current and future drone enthusiasts to "Fly RIGHT":

Register your drone

- All drones not flown for recreational purposes must be registered, regardless of weight
- Drones flown recreationally must be registered if they weigh more than 250 grams
- Register your drone through the [FAA DroneZone](#)

Interact with others

- Join a local organization or [FAA-recognized Community Based Organization](#)
- Engage in online forums

Gain knowledge

- Learn about drone safety and rules at faa.gov/uas
- Check the airspace prior to takeoff through our [B4UFLY app](#) or an [FAA-Approved LAANC UAS Service Supplier](#)

Have a safety plan

- Don't assume the flight will go as planned
- Know what you'll do if the weather changes or other aircraft or people get close
- Check your drone pre- and post-flight to ensure it's safe to fly
- Ensure you have approval to fly in controlled airspace through an [FAA-Approved LAANC UAS Service Supplier](#) or the [FAA DroneZone](#)

TRUST and Train

- Recreational flyers only need to pass [TRUST](#) once, prior to flying - it's the law
- You may take the free online test through any of the FAA approved test administrators
